

Appriss® Secure Audit

is a convenient and easy to use compliance auditing tool add-on to the Appriss Secure solution. Front of store, back room, fulfillment center, warehouse, maintenance room, perimeter, or parking lot—you need a digital auditing solution that goes wherever you do.

Benefit:

Helps conduct audits anytime, anywhere, 25% faster than before.

Secure Audit

Secure Audit makes your computer a storehouse for safe and secure data and information. It simplifies audits and helps identify operational issues. You can easily create your own audits, questions, and scoring. It has never been so easy to be efficient, organized, and productive. Make and save as many audits as required within your organization, across departments, business units, and brands.

Appriss Secure Audit from Appriss Retail is a powerful compliance audit solution, seamlessly integrated to Appriss Retail's Secure exception-based reporting solution, and purpose built for the cloud.

The simple user interface and sophisticated inner workings of Secure Audit makes it easy to collect and utilize information. A robust auditing program can be key in identifying issues and areas needing improvement. Secure Audit provides a flexible foundation; with all your data centralized in one place, audits can be accessed by a click by any authorized user, while completed audits and action plans can be auto-distribution to key staff.

Benefits Multiple Departments

Secure Audit improves AP/LP team productivity, and other departments also benefit.

OPERATIONS

Secure Audit is fully internationalized to work in any region, in any sized organization, and on any device. Designed for global businesses, it even supports multiple languages, currencies, and date/time formats. It allows you to share audit data across departments within the corporate office, with complete visibility to quickly identify training issues, operational issues, and compliance issues. In your stores and fulfillment centers you can track manager success, manager performance, and associated employee morale. In addition, it is remote friendly, allowing authorized managers to create self-audits, conduct surveys, and update action plans, helping increase overall efficiency of local associates.

FINANCE

Retailers following a compliance auditing program generally attain higher sales, increased productivity, and reduced employee turnover.

Audits That Get Results

What good is an audit with incomplete information or a confusing action plan? With Secure Audit you can easily conduct audits on-the-go and spend less time preparing, taking, and completing audits — in fact, you are not bounded and can create an unlimited number of audits. Using the real-time results of the current audit and historic information, you can create clear action plans, present them in an attractive, easy-to-understand format, and track them to successful conclusion. You can also create automated reminders, so the changes are implemented, and results are seen according to plan.

Track Manager Performance

Some managers have the Midas touch, and others simply do not. Secure Audit tracks manager performance as they move store to store. With it, district and regional managers can recognize the top performers and identify those in need of coaching. At the store level, managers can update their action plans in real-time, even conducting self-audits and surveys. When managers are in top form, morale improves and turnover drops.

Complete Compliance Reporting

KPI (Key Performance Indicator) data can be imported from many sources and combined with Secure Audit data to build insightful reports using the reporting tool. Reports, dashboards, heat maps, and benchmarking provide a powerful, easy to use, self-service tool, that gives you immediate visibility to areas that need improvement and allow you to make informed decisions. Automatic emailing to store, district, and regional managers makes sharing the information easy.

How Secure Audit Works

It reduces audit overhead by 25% by making the process easy and accurate. The solution offers full functionality on any device, so that the end user can choose the most convenient tool.

1. On her office laptop, the audit manager uses Secure Audit to create an audit for a new format of store.
2. On-site the auditor uses Secure Audit to select and complete the audit form on a tablet.
3. She takes several photos, records a short video, and quickly attaches them to the audit.
4. When she has completed the audit, she uses Secure Audit to create her final report, complete with easy-to-understand findings and action plans. The audit system emails the report to the appropriate personnel.
5. Secure Audit automatically issues follow-up alerts to the store manager who updates his action plans as actions are completed.

Summary

Secure Audit helps retailers conduct audits anytime, anywhere; increasing the efficiency of the AP/LP team by 25%.

Leveraging more than 20 years of data science expertise, Appriss Retail transforms ecommerce and omnichannel consumer interactions by providing real-time, actionable recommendations that reduce fraud, drive efficiency, and maximize profitability. The company's AI-driven, SaaS platform generates analytical insights and recommendations at more than 150,000 physical and online retail locations in 45 countries across six continents.
